

Not all hazards in the workplace are visible

Dusts, gases, fumes and vapours can be invisible to the naked eye and can cause serious lung diseases.

Workers' compensation claims for occupational lung diseases have increased over the past decade.

There are simple ways to help identify the hazards in your workplace:

Talk with your workers

Conduct air monitoring

Undertake a risk assessment

Review safety data sheets

Engage an occupational hygienist to provide advice

Refer to your WHS Regulator for advice
