

Managing the risk of a fall

As a person conducting a business or undertaking, you **must eliminate the risk of a fall**. If elimination isn't possible, you must provide adequate protection.

This includes:

1

providing a fall prevention device, such as scaffolding or an elevating work platform

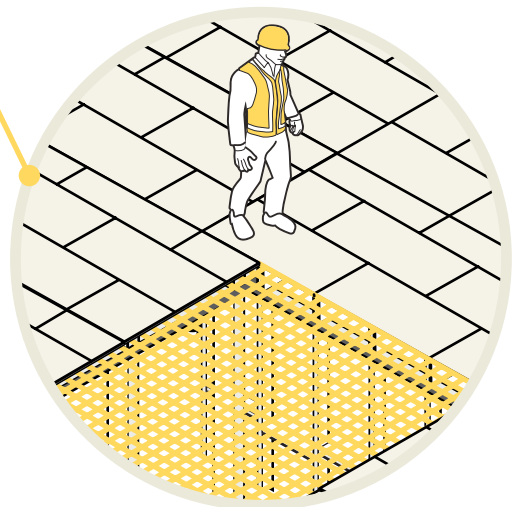

2

providing a fall prevention device, such as a rope access system, if **1** isn't possible

3

providing a fall arrest system, such as a safety net, if **1** or **2** isn't possible.

To minimise the risk of a fall, you may need to combine these controls.
