

How to find noise hazards

Identify any potential risks and hazards from noise by:

- Walking through the workplace at different times during the day, looking and listening for noisy activities and equipment
- Checking manufacturer's information (including labels) to determine noise levels of tools and plant equipment

Assess potential risks and hazards by:

- Consulting workers about their exposure to noisy activities during the work day and how they can be protected
- Talking to manufacturers and suppliers about noise emissions and safety guidance for their products

Control potential noise hazards and risks by:

- Identifying and implementing appropriate control measures
- Implementing manufacturer recommended and additional controls, and training workers on their use
- Monitoring and reviewing control measures regularly to ensure they remain effective
