

What is

Risk

Management

A risk assessment helps you understand how severe the risks are and what you need to do to manage them. Just follow these steps.

swipe to learn more →

Identify hazards *and assess risks*

- What could harm your workers?
- What is the likelihood of harm?
- Consult with your workers
- When, where and how often are workers exposed to things that might harm them

Control *risks*

- Aim to eliminate risks, if possible
- Minimise as far as practicable if the risk can't be eliminated
- Implement the most effective and reliable control measures

Monitor *and review*

- New hazards can emerge
- Risks can change
- Controls may no longer work
